What is NACLO?

A contest in which high school students learn about linguistics and language technologies by solving puzzles.

What is computational linguistics?

Computational linguistics is the science behind language technologies. You use language technologies every time you speak to your car or phone, ask a computer to translate something, or do a search in a web browser.

How do students benefit?

NACLO helps students identify potential careers related to languages and language technologies. They also exercise problem-solving skills and have fun!

Who can participate?

NACLO is free and open to anyone under age 20 who does not yet have a high school diploma.

When is the next contest?

Open round: January 2015

Invitational round: March 2015

International contest: Summer 2015
